

JAYTHAN HAYER

UI UX DESIGNER

I am a UI UX designer seeking a role focused primarily on User Interface design. I graduated from university studying architecture before enrolling onto the Careerfoundry UI Design course. The course is an intensive UI UX education which has allowed me to create three projects within its duration allowing me to learn and apply the hard theories of UI UX design. I am a passionate creative who enjoys creating graphic design pieces and traditional artworks in my spare time.

UI UX DESIGN PROJECTS

ARTEM

- Applied a mobile first approach to create a platform for emerging artists to flourish by publishing, connecting and discovering new art.
- Engaged in UX research, competitor analysis, user flows, low, mid and high fidelity wireframing, prototyping and creating mockups to create an intuitive and aesthetically beautiful app.
- Created a solution which provided artists a gallery to showcase their work, discover new art the user may enjoy by formulating an intuitive search system and dedicated a forum space in which artists are able to connect with one another.

LOCUS

- Designed a web responsive app with a mission of helping users discover their local area in-depth whilst connecting with friends.
- Throughout the design of this app I undertook the responsibilities of being both the UX designer and UI designer. As the UX designer my roles included doing user research, MVP, user flows, prototyping and usability testing. My UI design responsibilities included creating moodboards and style guides, considering responsive design, curating high quality mockups and A/B testing.
- Final solution consisted of creating an app that allowed users to find new locations that other friends had 'pinned'. Thus allowing the user to find locations that may not necessarily be advertised on Google resulting in the user exploring their local area more in-depth.

DULCIA

- Curated a mobile application for a luxury sweets and confectionary shop which allowed users to find products quickly and easily to match their particular needs.
- To supplement the production of the app I explored user flows before moving onto creating low, mid and then finally high fidelity wireframes. I finished the production by creating mockups of the product.
- Dulcia allowed customers to find deals easily on the homepage of the application, save items they may like and recommended items they may have interest in based on their past history of interaction with products.

WORK EXPERIENCE

- **Restaurant Server**
 - Ran restaurant order system, served customers and packaged orders during peak times.
 - Provided high levels of customer service at all times.
 - Communicated orders to the kitchen staff to ensure orders were made in optimal times, which increased my ability to perform under high stress.
- **NHS Track and Trace Call Handler, Customer Service Representative.**
 - Helped assist and advise people who had contracted covid-19 what they should do to stay safe.
 - Reassured and spoke to contacts who had covid until they felt relaxed, which improved my empathy skills.
- **Delivery Driver**
 - Ensured that orders were delivered to customers in a swift fashion, which sharpened my time keeping abilities.
 - Helped keep restaurant stock full by driving to pick up stock inbetween deliveries.
- **Sales Assistant**
 - Assisted in ensuring the shop was clean and shelves were full during peak times.
 - Assisted and served customers to a high standard, which improved my communication skills.
